Abstract of JP 2002312317 (A)

PROBLEM TO BE SOLVED: To realize a certain security management capable of effectively protecting a user certification information by dividing the user certification information for a setting information to a system and a user terminal, and dispersing and managing them. **SOLUTION:** A certification management center 1 divides the user certification information sent from a fingerprint sensor device 5 through a user terminal 2 at the time of registration into a system side certification element of respective constitution elements of the user certification information divided to a registration information at a system side and the other constitution element to a registration information set in the user terminal 2. The registration information is stored in the system. When the user certification information 2 is obtained and the registration information at the system side is obtained from a user data base DB at the time of certification of the user. After the original user certification information is produced from the stored registration information and the information in the user terminal 2 and the registration information at the system side obtained, the user certification is carried out by comparing the user certification information restored with the user certification information inputted at the time of certification of the user.
